

# Computational Logic Exercises Module VI – Logic of Propositions

Vincenzo Maltese

## Modelling example

### Symbols used in LOP

Which of the following symbols are used in LOP?

 $\sqcap \lnot \top \lor \equiv \sqcup \sqsubseteq \supset \bot \land \vDash$ 

**ANSWER:**  $\neg \lor \land \supset \equiv \top \bot \vDash$ 

### Well formed formulas

Which of the following formulas are NOT syntactically correct in LOP?

- a) MonkeyLow V BananaHigh
- b)  $\neg \neg MonkeyLow \land BananaHigh$
- c) MonkeyLow  $\neg \land$  BananaHigh
- d) MonkeyLow ⊃ ¬ GetBanana
- e) MonkeyLow ≡ BananaHigh
- f)  $\neg$  (MonkeyLow  $\lor$  BananaHigh)  $\supset$  BananaHigh

### ANSWER: c

### Translate natural language sentences into LOP

- David or Bruno come to the party
- $\textbf{David} \lor \textbf{Bruno}$
- Bruno will come to the party
- Bruno
- Bruno will come to the party, unless David is there
- David + Bruno
- Carlo comes to the party, therefore David comes too
- $\mathsf{Carlo} \supset \mathsf{David}$
- Either David or Bruno come to the party
- (David  $\land \neg$ Bruno)  $\lor$  (Bruno  $\land \neg$ David)
- Neither Carlo nor David will come to the party
- $\neg$  Carlo  $\land \neg$  David

### Translate natural language sentences into LOP

- If David comes to the party then Bruno and Carlo come too
- David  $\supset$  (Bruno  $\land$  Carlo)
- Angelo will come to the party, provided that Bruno comes and Carlo does not
- (Bruno  $\land \neg$ Carlo)  $\supset$  Angelo
- Carlo comes to the party given that David doesn't come, but, if David comes, then Bruno doesn't come
- $(\neg David \supset Carlo) \land (David \supset \neg Bruno)$
- Carlo comes to the party only in case Angelo and Bruno do not come
- ( $\neg$ Angelo  $\land \neg$ Bruno) = Carlo
- A sufficient condition for Angelo coming to the party, is that Bruno and Carlo aren't coming
- $(\neg Bruno \land \neg Carlo) \supset Angelo$
- A necessary and sufficient condition for Angelo coming to the party, is that Bruno and Carlo aren't coming
- $(\neg Bruno \land \neg Carlo) \equiv Angelo$

### Modelling: Define the theory for a certain problem

**Passing the exam.** If you play and you study you'll pass the exams, while if you play and don't study you won't pass. Thus, if you play, then you study and you'll pass the exams, or you don't study and you won't pass it.

Define the set of Propositions {P, S, E} such that:

P = "you play", S = "you study"; E = "you pass the exam"

The Theory T can be formalized as follows:

 $(\mathsf{P}\land\mathsf{S})\supset\mathsf{E}$ 

- $(\mathsf{P} \land \neg \mathsf{S}) \supset \neg \mathsf{E}$
- $\mathsf{P} \supset ((\mathsf{S} \land \mathsf{E}) \lor (\neg \mathsf{S} \land \neg \mathsf{E}))$

## Modelling: Define the theory for a certain problem

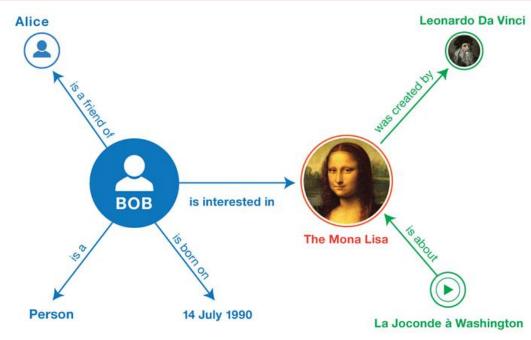

**The effect of bananas.** Bananas may differ in many ways. However, there are red and yellow bananas. I like bananas, but I eat only yellow bananas. If I do not eat at least a banana I get crazy.

Define the set of Propositions {RedBanana, YellowBanana, EatBanana, Crazy, Banana}.

- The Theory T can be formalized as follows:
- RedBanana ⊃ Banana
- YellowBanana ⊃ Banana
- EatBanana ⊃ YellowBanana
- $\neg$  EatBanana  $\supset$  Crazy

## From a knowledge graph to a LOP theory

**LOP THEORY:** The LOP theory will include a proposition for each fact in the KG, and may contain some negations of propositions that are not expressed as facts in the KG. For instance:

Theory#1:

[wasCreatedBy(TheMonaLisa, LeonardoDaVinci)]

[friendOf(Bob, Alice)]

- [friendOf(Bob, Carol)]

Theory#2:

. . .

TheMonaLisa\_wasCreatedBy\_LeonardoDaVinci

Bob\_friendOf\_Alice

- Bob\_friendOf\_Carol

### Truth tables

Given the propositions A and B, calculate the Truth Table of the following formulas:

- 1. A ^ B
- 2. A V B
- 3. A **≡** B

	VARIABLES		(1)	(2)	(3)
	Α	В	A∧B	A∨B	A≡B
POSSIBLE ASSIGNEMENTS	Т	Т	Т	Т	Т
	Т	F	F	Т	F
	F	Т	F	Т	F
	F	F	F	F	Т

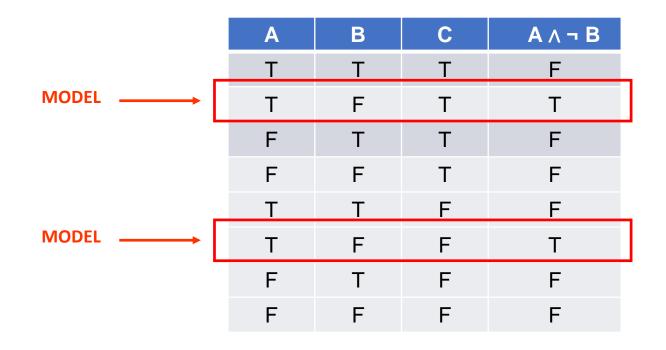

# Finding models of formulas using Truth Tables

**RECALL:** an interpretation function I is a model for a formula P if and only if I(P) = true List the models for the following formulas, given the propositions A, B, C:

- 1. A∧¬B
- 2.  $(A \land B) \lor (B \land C)$
- 3. (A ∨ B) ⊃ C
- 4.  $\neg A \equiv B \equiv C$

See here for (1). Check yourself for (2), (3), (4).

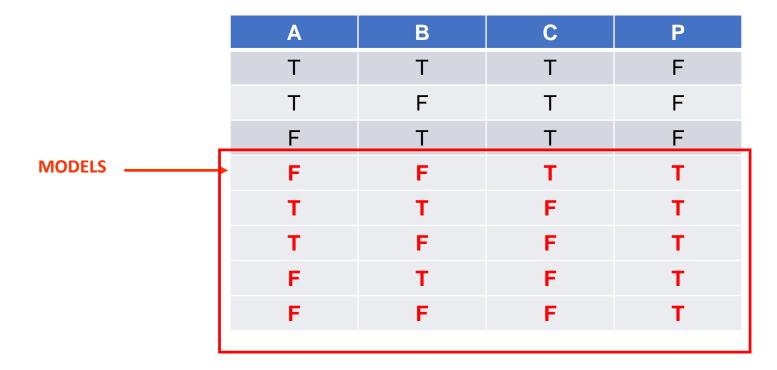

### Finding models of formulas using Truth Tables

List the models for the formula P: (AVB)  $\supset \neg C$ 

You can rewrite P as  $\neg$  (A V B) V  $\neg$  C that is equivalent to ( $\neg$  A  $\land$   $\neg$  B) V  $\neg$  C

## Reasoning with Truth Tables

Prove that the formula P is **unsatistiable**, where P:  $(A \land B) \land \neg B$ **RECALL**: a formula is unsatistiable if it is false for all assignments (there are no models)

Α	В	Р
Т	Т	F
Т	F	F
F	Т	F
F	F	F

### **Reasoning with Truth Tables**

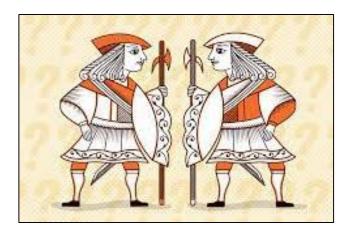

Prove that the formula P is **valid**, where P:  $\neg(A \supset B) \supset (A \land \neg B)$ **RECALL**: a formula is valid if it is true for all assignments (all assignments are models for it)

Notice that you can rewrite it as  $\neg\neg(A \supset B) \lor (A \land \neg B)$ that is equivalent to( $\neg A \lor B$ )  $\lor (A \land \neg B)$ 

Α	В	Р
Т	Т	Т
Т	F	Т
F	Т	Т
F	F	Т

# Modeling and solving a problem with LOP

Knights and Knaves. A very special island is inhabited only by knights and knaves. Knights always tell the truth, and knaves always lie. You meet two inhabitants: Zoey and Mel.
(1) Zoey tells you that Mel is a knave.
(2) Mel says 'Neither Zoey nor I are knaves'.
Can you determine what are they? (who is a knight and who is a knave?)

#### **PROOF**:

Let use define two propositions Z = "Zoey is a knight" and M = "Mel is a knight". The two sentences above can be translated in LOP as follows:

- (1)  $Z \supset \neg M$
- (2)  $M \supset Z \land M$

We can use truth tables to prove that there are only two possible answers:

- Both lie, i.e. they are both knaves, i.e. I(Z) = F and I(M) = F
- Zoey tells the true (is a Knight) and Mel lies (is a knave), i.e. I(Z) = T and I(M) = F

### Prove equivalence

Let A, B, C, D, E be propositions. Prove by using basic facts that:  $((A \lor \neg E) \land (\neg B \lor \neg D)) \supset C \equiv (\neg A \land E) \lor ((B \land D) \lor C)$ 

Ξ

Ξ

Ξ

Ξ

#### **PROOF**:

 $((A \lor \neg E) \land (\neg B \lor \neg D)) \supset C$ 

- Ξ  $(A \vee \neg E) \supset ((\neg B \vee \neg D) \supset C)$  $(A \lor \neg E) \supset ((B \land D) \lor C)$ 
  - $\neg$  (A V $\neg$ E) V ((BAD) V C)
  - $(\neg A \land E) \lor ((B \land D) \lor C)$

by Implication and conjunction  $(A \lor \neg E) \supset (\neg (\neg B \lor \neg D) \lor C)$  by Implication and disjunction by De Morgan laws by Implication and disjunction by De Morgan laws

### Try yourself for:

- 1.  $\neg (A \lor (A \supset B)) \equiv \neg A \land \neg B$
- 2.  $\neg (A \supset B) \land (\neg B \land \neg C) \equiv A \land \neg (B \lor C)$
- 3.  $\neg(A \supset \neg B) \land (\neg B \land \neg C) \equiv \bot$
- 4.  $(C \supset (A \supset \neg B) \supset (C \supset \neg A)$

### Prove entailment

**RECALL**:  $\Gamma \vDash \psi$  iff all models satisfying the formulas in  $\Gamma$  also satisfy  $\psi$ 

Let A, B, C be propositions. If  $A \models B \land C$ , then  $A \models B$  or  $A \models C$  or both?

#### PROOF:

If  $A \models B \land C$ , for all I such that I(A) = True it should be  $I(B \land C) =$  True. However, by definition this means that I(B) = True and I(C) = True. Therefore both  $A \models B$  and  $A \models C$ .

### Prove entailment

**RECALL**: If for all and only the atomic propositions P occurring in a formula A we have I(P) = I'(P), Then  $I \models A$  iff  $I' \models A$ . That is:

- The truth value of atomic propositions which occur in A fully determines the truth value of A
- The truth value of the atomic propositions which do not occur in A play no role in the computation of the truth value of A;

**EXERCISE:** Let X, Y, Z be atomic propositions. Let us take A =  $(X \land \neg Z)$  and interpretations I = {X, Y} and I' = {X} Then  $I \models A$  iff  $I' \models A$ .

#### **PROOF**:

RECALL: I = {X, Y} means that I(X) = T, I(Y) = T, I(Z) = F, while I' = {X} means that I(X) = T, I(Y) = F, I(Z) = F

 $I(A) = I(X \land \neg Z) = I(X) \land I(\neg Z) = T$  $I'(A) = I'(X \land \neg Z) = I'(X) \land I'(\neg Z) = T$ 

# Reasoning by applying entailment properties

Let A and B be propositions.

Prove that the formula P is **valid**, where P:  $(A \supset B) \supset (\neg A \lor B)$ 

#### PROOF:

A way to prove **validity** is to show that  $P \models T$ .

This can be done by applying well known tautologies (e.g. De Morgan).

$(A\supsetB)\supset(\negA\lorB)$	Ξ	$\neg(A \supset B) \lor (\neg A \lor B)$	by
	Ξ	$\neg(\neg A \lor B) \lor (\neg A \lor B)$	by
	Ξ	Т	by

by Implication and disjunction by Implication and disjunction by The law of the excluded middle

### Prove entailment

Let A, B, C, D, E be propositions, and given that:

P =  $(A \lor B) \land (\neg C \lor \neg D \lor E)$ Q1 =  $A \lor B$ Q2 =  $(A \lor B \lor C) \land ((B \land C \land D) \supset E)$ Q3 =  $(A \lor B) \land (\neg D \lor E)$ 

Does  $P \models Q_i$ ?

### PROOF:

Let X = A  $\lor$  B, Y =  $\neg$ D  $\lor$  E, then we can rewrite: P = X  $\land$  ( $\neg$ C  $\lor$  Y); Q1 = X; Q2 = (X  $\lor$  C)  $\land$  ( $\neg$ B  $\lor$   $\neg$ C  $\lor$  Y); Q3 = X  $\land$  Y

 $P \models Q1$  is obvious. Since  $X \models X \lor C$  and  $(\neg C \lor Y) \models (\neg B \lor \neg C \lor Y)$ , then  $P \models Q2$ . Since  $Y \models (\neg C \lor Y)$ , then  $Q3 \models P$  (and not the vice versa).

Ρ

### Prove entailment using Truth Tables

Let A, B, C, D, E be propositions, and given that:

- $= (A \lor B) \land (\neg C \lor \neg D \lor E)$
- Q1 = A V B
- Q2 =  $(A \lor B \lor C) \land ((B \land C \land D) \supset E)$
- Q3 =  $(A \lor B) \land (\neg D \lor E)$

(1) List all truth assignments such that  $P \models Qi$ 

(2) Is there any assignment such that  $P \models Qi$  for all i?

**Solution to (1):** First compute the truth tables for all the propositions above. Then, list all rows for which both P and Qi are true.

Solution to (2): Check whether there is any assignment for which all the sentences above are true.

Let A and B be propositions. Let T1= {( $A \supset B$ )} and T2= { $\neg A \land B$ }. Say which of the following sentences is true.

- a) T1 has 2 models
- b) T2 has 1 model
- c) T1 and T2 have 2 models in common
- d) Does T1  $\models$  T2?
- e) Does T2  $\models$  T1?
- f) T1 and T2 are maximal theories for M = {B}

	А	В	$A \supset B$	¬А ∧ В
M1	Т	Т	Т	F
M2	Т	F	F	F
M3	F	Т	Т	т
M4	F	F	Т	F

#### ANSWER

b, e, f

Let A and B be propositions. Let T1= {(A  $\equiv$  B)} and T2= {¬A, B}. Say which of the following sentences is true.

- a) T1 has 2 models
- b) T2 has 1 model
- c) T1 and T2 have 1 model in common
- d) Does T1  $\models$  T2?
- e) Does T2  $\models$  T1?
- f) T2 is a maximal theory for M = {B}
- g) T1 is a maximal theory for M = {A, B}
- h) The minimal model of T2 is M = {B}
- i) The minimal model of T1 is M = {A, B}

### ANSWER

The models of T1 are {M1, M4}. The models of T2 are {M3}. Note that M1 = {A, B}, M4 = {} and M3 = {B}. Therefore the true sentences are: a, b, f, h

	А	В	A ≡ B	−A
M1	Т	Т	Т	F
M2	Т	F	F	F
M3	F	Т	F	Т
M4	F	F	Т	Т

23

**RECALL:** A minimal Model M of T is the intersection of all models of T.

Let A, B, C be propositions. Given the theory T =  $\{\neg A \lor \neg B, C \land \neg B\}$ , say which of the following sentences is true.

- a) T has 2 models
- b) T has 1 model
- c) There is no minimal model of T
- d) T satisfies M = {A}
- e) The minimal model is M = {C}
- f) The minimal model is M = {A, C}

#### ANSWER

a, e

### DPLL

Input: A set of clauses  $\phi$ .

**Output**: A truth value indicating whether  $\phi$  is satisfiable.

### function DPLL( $\phi$ )

while there is a unit clause  $\{I\}$  in  $\phi$  do

 $\phi \leftarrow \text{unit-propagate}(I, \phi);$ 

while there is a literal / that occurs pure in  $\phi$  do

 $\phi \leftarrow \text{pure-literal-assign}(I, \phi);$ 

if  $\phi$  is empty then return true;

if  $\phi$  contains an empty clause then return false;

 $I \leftarrow \text{select-literal}(\phi);$ 

**DPLL(** $\phi \land \{I\}$ **) or DPLL(** $\phi \land \{\neg(I)\}$ **)**;

**Unit Propagation** 

Pure Literal Elimination

**Consistency Check** 

**Empty Close Test** 

Splitting rule

### Convert a formula in CNF

 $(\mathsf{A} \lor \mathsf{B}) \supset \neg \mathsf{A}$ 

```
\begin{array}{l} \mathsf{CNF}(\neg (\mathsf{A} \lor \mathsf{B})) \bigotimes \mathsf{CNF}(\neg \mathsf{A}) \\ (\mathsf{CNF}(\neg \mathsf{A}) \land \mathsf{CNF}(\neg \mathsf{B})) \bigotimes \mathsf{CNF}(\neg \mathsf{A}) \\ (\neg \mathsf{A} \land \neg \mathsf{B}) \bigotimes \neg \mathsf{A} \\ (\neg \mathsf{A} \lor \neg \mathsf{A}) \land (\neg \mathsf{B} \lor \neg \mathsf{A}) \\ \neg \mathsf{A} \land (\neg \mathsf{B} \lor \neg \mathsf{A}) \\ \mathsf{n} \text{ terms of clauses becomes } \{\{\neg \mathsf{A}\}, \{\neg \mathsf{B}, \neg \mathsf{A}\}\} \end{array}
```

 $(C \supset \neg A) \land \neg (B \land \neg A)$ 

 $\begin{array}{l} \mathsf{CNF}(\mathsf{C} \supset \neg\mathsf{A}) \land \mathsf{CNF}(\neg(\mathsf{B} \land \neg\mathsf{A})) \\ (\mathsf{CNF}(\neg\mathsf{C}) \bigotimes \mathsf{CNF}(\neg\mathsf{A})) \land (\mathsf{CNF}(\neg\mathsf{B}) \bigotimes \mathsf{CNF}(\neg\neg\mathsf{A})) \\ (\neg\mathsf{C} \lor \neg\mathsf{A}) \land (\neg\mathsf{B} \lor \mathsf{A}) \\ \mathsf{In terms of clauses becomes } \{\{\neg\mathsf{C}, \neg\mathsf{A}\}, \{\neg\mathsf{B}, \mathsf{A}\}\} \end{array}$ 

### Use DPLL to prove satisfiability

 $B \land \neg A \land (\neg C \lor A) \land (B \lor C)$ 

```
In terms of clauses is: {{B}, {¬A}, {¬C, A}, {B, C}}
```

```
{{B}, {¬A}, {¬C, A}, {B, C}}
{{T}, {¬A}, {¬C, A}, {T, C}}
{{¬A}, {¬C, A}}
{{T}, {¬C, A}}
{{T}, {¬C, L}}
{{-C}}
{{T}}
```

Therefore the formula is satisfiable. A possible model  $M = \{\neg A, B, \neg C\}$ 

### Use DPLL to prove satisfiability

 $(\mathsf{C} \supset \mathsf{A}) \land (\mathsf{C} \supset \mathsf{B}) \land \neg (\mathsf{A} \land \mathsf{B})$ 

First convert it in CNF:  $(\neg C \lor A) \land (\neg C \lor B) \land (\neg A \lor \neg B)$ In terms of clauses is: {{¬C, A}, {¬C, B}, {¬A, ¬B}}

```
We can apply the pure literal:
{{¬C, A}, {¬C, B}, {¬A, ¬B}}
{{T, A}, {T, B}, {¬A, ¬B}}
{{¬A, ¬B}}
```

We then select a literal for the splitting rule: {{¬A}, {¬A, ¬B}} {{¬}, {¬A, ¬B}} {{¬}, {¬}, ¬B}}

Therefore the formula is satisfiable.

### Use DPLL to prove satisfiability

{{¬A, C, D}, {¬B, F, D}, {¬B, ¬F, ¬C}, {¬D, ¬B}, {B, ¬C, ¬A}, {B, F, C}, {B, ¬F, ¬D}, {A, E}, {A, F}, {¬F, C, ¬E}, {A, ¬C, ¬E}}

There are no unit clauses, nor pure literals. Let us then select the literal A and apply the splitting rule. {{A}, {¬A, C, D}, {¬B, F, D}, {¬B, ¬F, ¬C}, {¬D, ¬B}, {B, ¬C, ¬A}, {B, F, C}, {B, ¬F, ¬D}, {A, E}, {A, F}, {¬F, C, ¬E}, {A, C, ¬E}} {<mark>{ T}</mark>, {<u>⊥</u>, C, D}, {¬B, F, D}, {¬B, ¬F, ¬C}, {¬D, ¬B}, {B, ¬C, <u>↓</u>}, {B, F, C}, {B, ¬F, ¬D}, {<mark>T</mark>, E}, {<mark>T</mark>, F}, {¬F, C, ¬E}, {<mark>T</mark>, C, ¬E}} {{C, D}, {¬B, F, D}, {¬B, ¬F, ¬C}, {¬D, ¬B}, {B, ¬C}, {B, F, C}, {B, ¬F, ¬D}, {E}, {F}, {¬F, C, ¬E}, {C, ¬E}} {{C, D}, {¬B, F, D}, {¬B, ¬F, ¬C}, {¬D, ¬B}, {B, ¬C}, {B, F, C}, {B, ¬F, ¬D}, {\\[\], {F}, {¬F, C, \\[\]}, {C, \\[\]}} {{C, D}, {¬B, F, D}, {¬B, ¬F, ¬C}, {¬D, ¬B}, {B, ¬C}, {B, F, C}, {B, ¬F, ¬D}, {F}, {¬F, C}, {C}}  $\{\{C, D\}, \{\neg B, \top, D\}, \{\neg B, \bot, \neg C\}, \{\neg D, \neg B\}, \{B, \neg C\}, \{B, \top, C\}, \{B, \bot, \neg D\}, \{\top\}, \{\bot, C\}, \{C\}\}$ {{C, D}, {¬B, ¬C}, {¬D, ¬B}, {B, ¬C}, {B, ¬D}, {C}, {C}}  $\{\{\mathsf{T}, \mathsf{D}\}, \{\neg\mathsf{B}, \bot\}, \{\neg\mathsf{D}, \neg\mathsf{B}\}, \{\mathsf{B}, \bot\}, \{\mathsf{B}, \neg\mathsf{D}\}, \{\mathsf{T}\}, \{\mathsf{T}\}\}$ {**-B**}, {**-**D, **-**B}, {B}, {B, **-**D}}  $\{\{\top\}, \{\neg D, \top\}, \{\bot\}, \{\bot, \neg D\}\}$ {{¬D}, {}, {¬D}} There is an empty clause. Therefore it returns false. We need to check with the literal  $\neg A$ :

### Use DPLL to prove unsatisfiability

By using DPLL, prove the unsatisfiability of  $(B \supset A) \land (\neg A \land B)$ 

```
First convert it in CNF: (\neg B \lor A) \land \neg A \land B
In terms of clauses is: {{\neg B, A}, {\neg A}, {B}}
```

```
{{¬B, A}, {¬A}, {B}}
{{¬B, ⊥}, {T}, {B}}
{{¬B, {B}}
{{¬B}, {B}}
{{T}, {⊥}}
{{}}
```

There is an empty clause, therefore it returns false. Therefore the formaula is unstatistiable.

### Use DPLL to prove validity

By using DPLL, prove the validity of  $(A \supset B) \supset (\neg B \supset \neg A)$ 

```
First negate the formula: \neg((A \supset B) \supset (\neg B \supset \neg A))
Then convert it in CNF: (\neg A \lor B) \land \neg B \land A
In terms of clauses is: {{\neg A, B}, {\neg B}, {A}}
```

```
{{¬A, B}, {¬B}, {A}}
{{¬A, ⊥}, {T}, {A}}
{{¬A}, {A}}
{{¬A}, {A}}
```

There is an empty clause, therefore it returns false. Therefore the formaula is valid.

# Use DPLL

- By using DPLL, prove the following formula is satisfiable but not valid:  $\neg(A \lor B) \supset C$ 
  - 1. Prove satisfiability by computing CNF of the formula and by checking that the DPLL returns true.
  - 2. Prove not validity by checking that the negation of the formula is satisfiable, i.e. by computing CNF of the negation of the formula and by checking that the DPLL returns true.

Try it yourself.

• By using DPLL, prove the validity of  $(A \land B) \lor C \equiv (A \supset \neg B) \supset C$ 

Try it yourself.
